

ANNUAL REPORT OF WATER YEAR 1992

Charman Justice - Commissioner

There was very little Deep Creek water, No snow melt or run off at all. The Mosby Ranch was using water from east Mosby-Creek on April 13th. In April there was problems with some filingholders using DeepCreek water, He was cleaning ditch and instead of sending the water back up to those entitled to it, He let a nonfiling holder use the water or put it out a headgate and run the water into the White Rocks canal.

The Huber weir on the Huber canal was dug up and reinstalled, In checking, or reading it and the lower one, I can find very little or no ditch loss. In August when it was real hot I found there was 0.08 s.f.w. less at the lower one. When Mosby water is present I still have to go to all the headgates below the Huber Headgate.

Mosby water came out of the mountain on May 3rd. That is the earliest ever that we have gotten Mosby water. There was 5667.74 acre feet delivered this year. In 1991 we had 4634.00 acre feet. That is 1033.74 acre feet increase over 1991.

Mosby water fell off in sept. and oct. The rain in October helped wet things down before frost. The canal below Juluis was cleaned and the bank fixed so we don't lose as much water to ditch loss.

Dean Clerico was a big help on several occasions. He learned a lot, still has to learn how and when to tell the difference between Deepcreek and Mosby water. He has never been to the Cook headgate because it or the gate to it was locked.

Arthur Reichle water was put back in the ditch on June 4th ,
He had one water turn and then it was taken out again, In sept.
I was told to put it back in Raymond Murray's ditch.

The Bever ponds are a problem getting the water to the
bottom of the ditch. The last two water turns it has taken
37 hours to get to the bottom stockholder.

Again I want to thank the directors of both Mosby and
Deep Creek for there help. I want to thank all the stockholders
that cleaned their weirs and headgates and cut down the rosebushes,
willows, weeds and etc.
